

Compact-line

Weaner and finisher pens

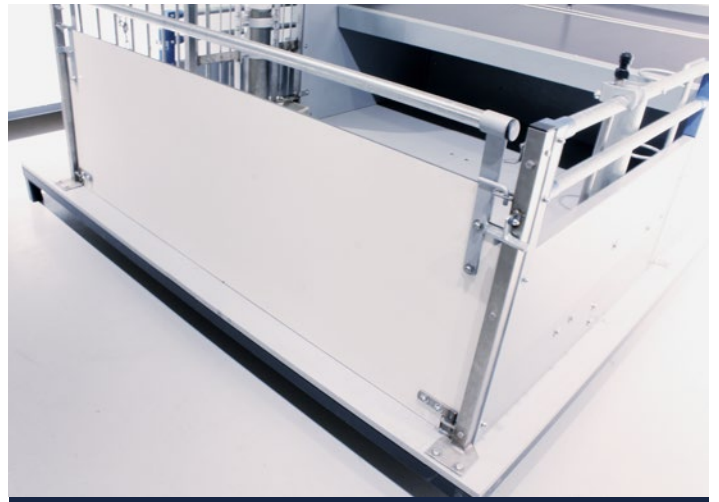

Vissing Agro's „Compactline“ penning is made of compact fiber, which is an incredibly strong and durable material despite its thickness of only 10 mm. The penning takes up a minimum of space in the pig unit allowing more animals in the whole area as compared to thicker penning. The panels have a smooth and dense surface and are extremely easy to clean.

The penning system comprises a combination of closed and ventilated separation walls which provide pigs optimal conditions for growth. Two-climate weaner pens are built in modules comprising 73 cm high walls below the cover and 61 cm panel combined with one horizontal pipe above the wall in the remaining part of the pen. Finisher pens are 82 cm high and made of 61 cm panels combined with two horizontal pipes above. The pens might be designed with custom-made gates fitting the width of the pen or the width of the corridor. Small gates have a raise-lowering function with 15 mm lift to minimize the distance to the floor while preventing manure in the walkway. The contact grid can be made of stainless steel or galvanized steel. The system is as always mounted to the floor via stainless steel fixtures, posts or brackets.

Facts

- Stihøjde: 73/82 cm
- Fiberplader: 10 mm
- Lille eller stor låge
- Gitter galvaniseret eller rustfrit
- Rustfri stolper og beslag
- Foderautomat, rustfri eller polymerbeton krybbe
- Overdækning i vandafvisende træplade
- Opluk på låg manuelt eller automatisk
- Vandforsyning med kop eller drikkeventil.
- Vandforsyning i plast
