

## Farrowing pen

Vissing Agro's farrowing pens are designed to provide sow and piglets optimal conditions throughout the whole lactation period. Great care has been taken to provide the sow as much freedom of movement as possible whilst piglets have quick and easy access to the sow's teats regardless of their size. The width of the farrowing crate can be adjusted as needed according to the size of the sow. During farrowing it is recommended to adjust the farrowing crate to a narrow position for optimum protection of the newborn piglets. After 4-5 days the crate can be readjusted to allow more space for the sow and piglets while nursing. The crate is provided with tiltable bars which control the movement of the sow and prevent crushing of the piglets. The back gate of the farrowing crate is designed with telescopic adjustment that provides ample space and freedom for the staff while working inside the pen. The trough comes in stainless steel with a volume of 21 liters. The piglet creep area can be provided in plastic or water-resistant wood with a front edge and a hole for a heating lamp to maintain a warm environment. The piglet creep area itself is adapted to the size of the farrowing pen and automatic opening of the cover can be provided additionally.

pig experts and  
we stand by that**

Telescopic adjustment of crate and tiltable rear gate

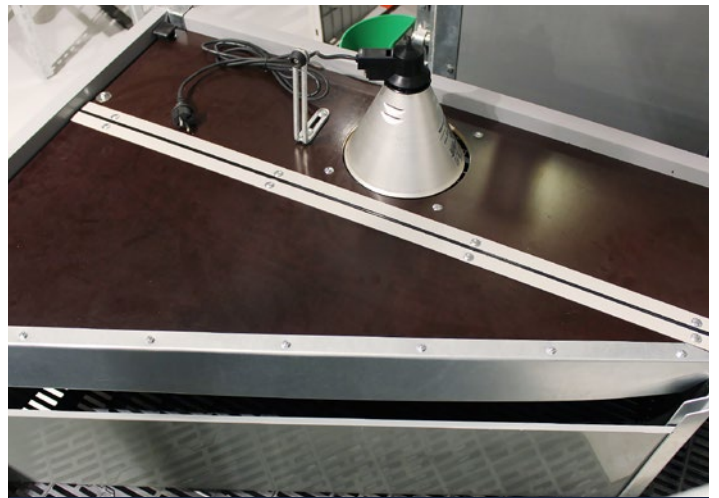

Sow trough

Integrated water supply

Farrowing crate with tiltable bars

Piglet creep area with blocking plate and heating lamp

## Facts

- Pen length: 250-280 cm
- Pen width: 160-180 cm
- Height of penning: 50 cm
- Farrowing crate length from through: 210 cm
- Long molded fingers
- Tiltable bars with noise reduction
- Distance between tilting bars: 37-115 cm

- Tiltable rear gate covering opening in slats
- Creep area with two-part cover
- Stainless steel sow trough 21 L
- Water system in corrosion resistant materials
- High yielding sow water nipple minimum 10 l/min
- Water system for piglets integrated in penning
- Water nipple or water cup for piglets
