

PP panel penning

Finisher, gilt and sow pens

Vissing Agro offers the market's most robust solutions for pigs. The penning is designed to provide maximum stability and durability. The equipment might be designed in several different ways either as a panel/steel bar solution or in a strong 50 mm PP panel or as a combination of these. It is also possible to incorporate different types of open grids made of stainless steel or galvanized steel. Furthermore, the many combination options make it possible to adapt the penning to the slope of the floor, whether it is new or existing.

50 mm panels are delivered in light gray color with a smooth surface for easy cleaning. Penning is 100, 110 or 120 cm high and mounted with strong galvanized posts 50 x 50 mm with same height as the pen sides or with 210 cm high posts connected with 1" galvanized pipe for increased stability. Panel penning is suitable for finishers, gilts and sows housed in groups including pens for floor feeding, trickle feeding, free access stalls or ESF.

**We call ourselves
pig experts and
we stand by that**

Relief pen

Gestation unit with free access stalls and free space area

Finisher pen with integrated liquid feeding pipe

Wean-to-finish pen

Facts

- Pen height: 100/110/120cm
