

Finisher pens with PVC boards

Vissing Agro finisher penning made of 35 mm PVC boards is an economically attractive solution, without compromising on quality and materials. The pen comprises a combination of closed and ventilated separation walls which gives the pigs the most optimal conditions for growth. The pen walls have a smooth and dense surface and are extremely easy to clean. The pens are built in modules and can be provided in a height of 87 cm or 100 cm. Penning might include PVC boards 62 cm high with two pipes on top and a total height of 87 cm, 75 cm PVC boards with two pipes on top and a total height of 100 cm or PVC boards 100 cm high. The pens might include gates covering the width of the pen or small custom-made gates.

In connection with liquid feeding the feed pipes might be integrated into the pen wall which makes cleaning extremely easy. The feed tube is connected directly on top of the pen wall. The pen wall is always mounted on the floor with stainless steel fittings or solid posts anchored to the floor.
