

Mating stall

The mating stall is designed so that it provides ample space for both the sow and the staff while facilitating a strong stimulation of estrus and high reproduction performance. The stall is made with saloon gates making it easy to move the gilt or sow into the stall, while the staff can enter the stall without opening the gate. The stall design allows implementation of either a polymer concrete trough or a stainless suspended trough. The standard stall has prefabricated bars in front but can also be fitted with a front gate. The stall is hot dip galvanized. Stainless steel fixtures and solid steel rods supporting the stall secures a long durability.

We call ourselves
pig experts and
we stand by that
